CAL® Operating Instructions

The Color AquaLuminator® (CAL®) Light has various operating settings that are controlled by the single power switch located on the transformer housing.

The CAL® Light can illuminate the pool with 4 color options, (Blue, Green, Magenta, or White). The operating settings allow the colors to be fixed or to cycle at various speeds. For example, the Standard Cycle will cycle through all the colors within 60 seconds.

NOTE

No two pools will be illuminated the same.

The illumination of the pool is substantially affected by the design and construction of the pool. The shape and size of the pool, the color of the liner, the location of the light, and other variations may significantly effect the illumination of the pool.

INITIAL START-UP
Turn CAL Light ON
(Requires the light was OFF for more than 2 minutes)

Fixed on last color seen before powering OFF

Turn OFF for Approx. 15 seconds then back ON

Turn OFF then ON in less than 5 seconds — 1
